

Moving Culture from Compliance to Risk Management At Multiple Plants & Locations

Birendra Verma, Joint President & Group Head Safety

Advancing the Culture in Large Organization : Key Strategies

- Vision on Transformation Path
- Shift in Approach
- Facilitate culture transformation
- Strengthen Management System
- Knowing Business Process & Role at different level
- Leaders knows Risk Assessment Process and their outcome
- Robust review process

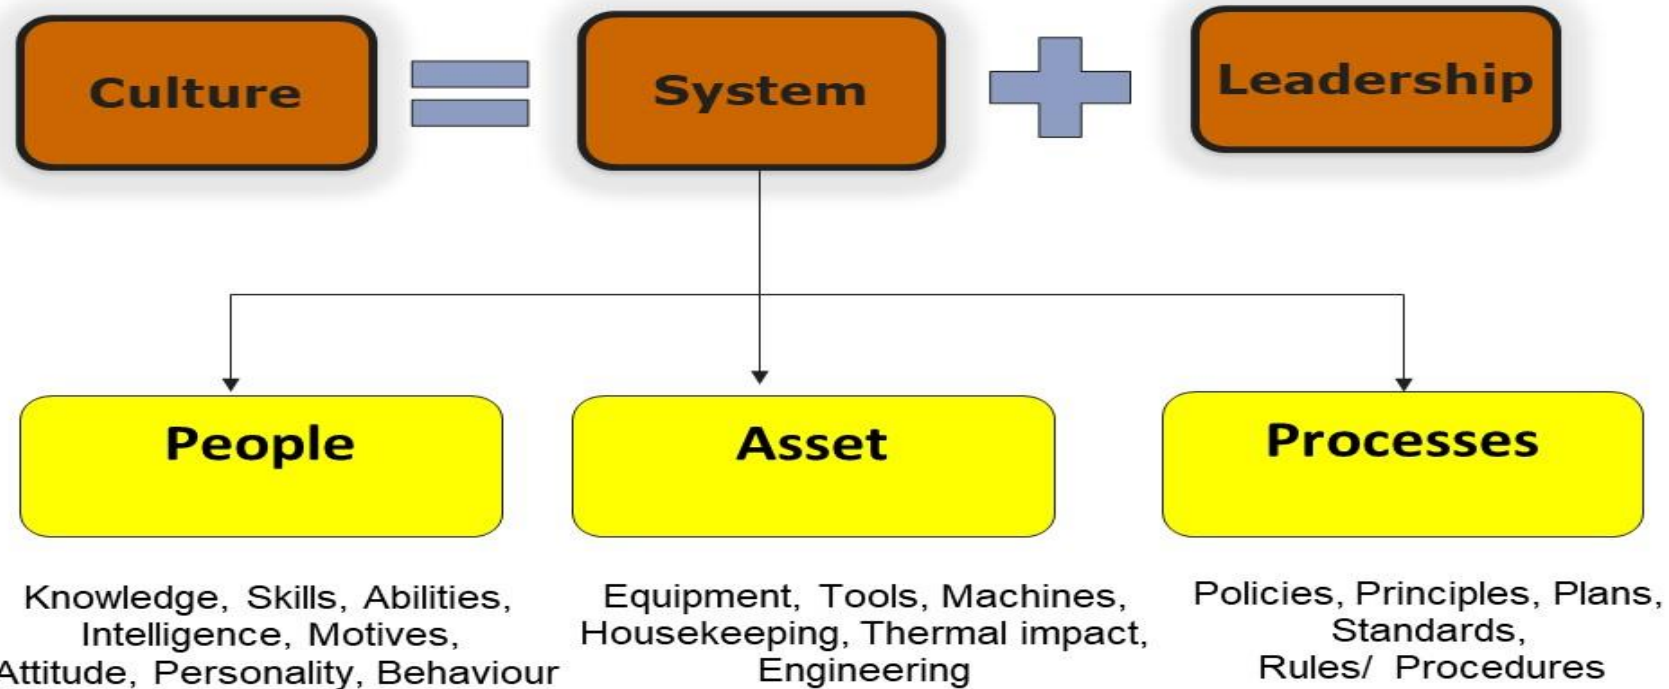

Moving from Compliance to Risk Management & Beyond

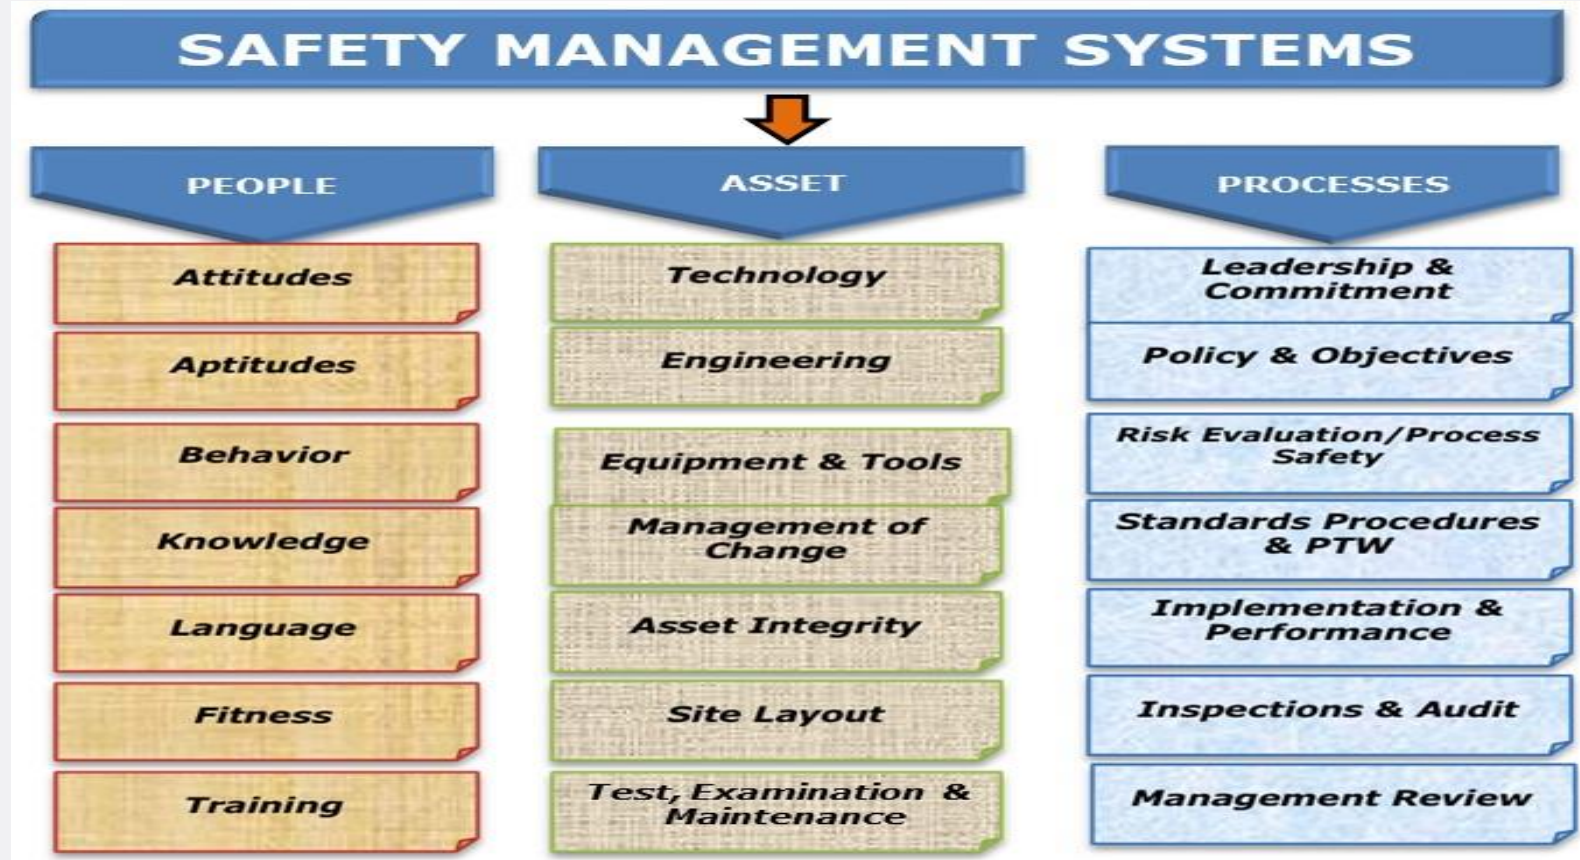

Need Shift in Approach

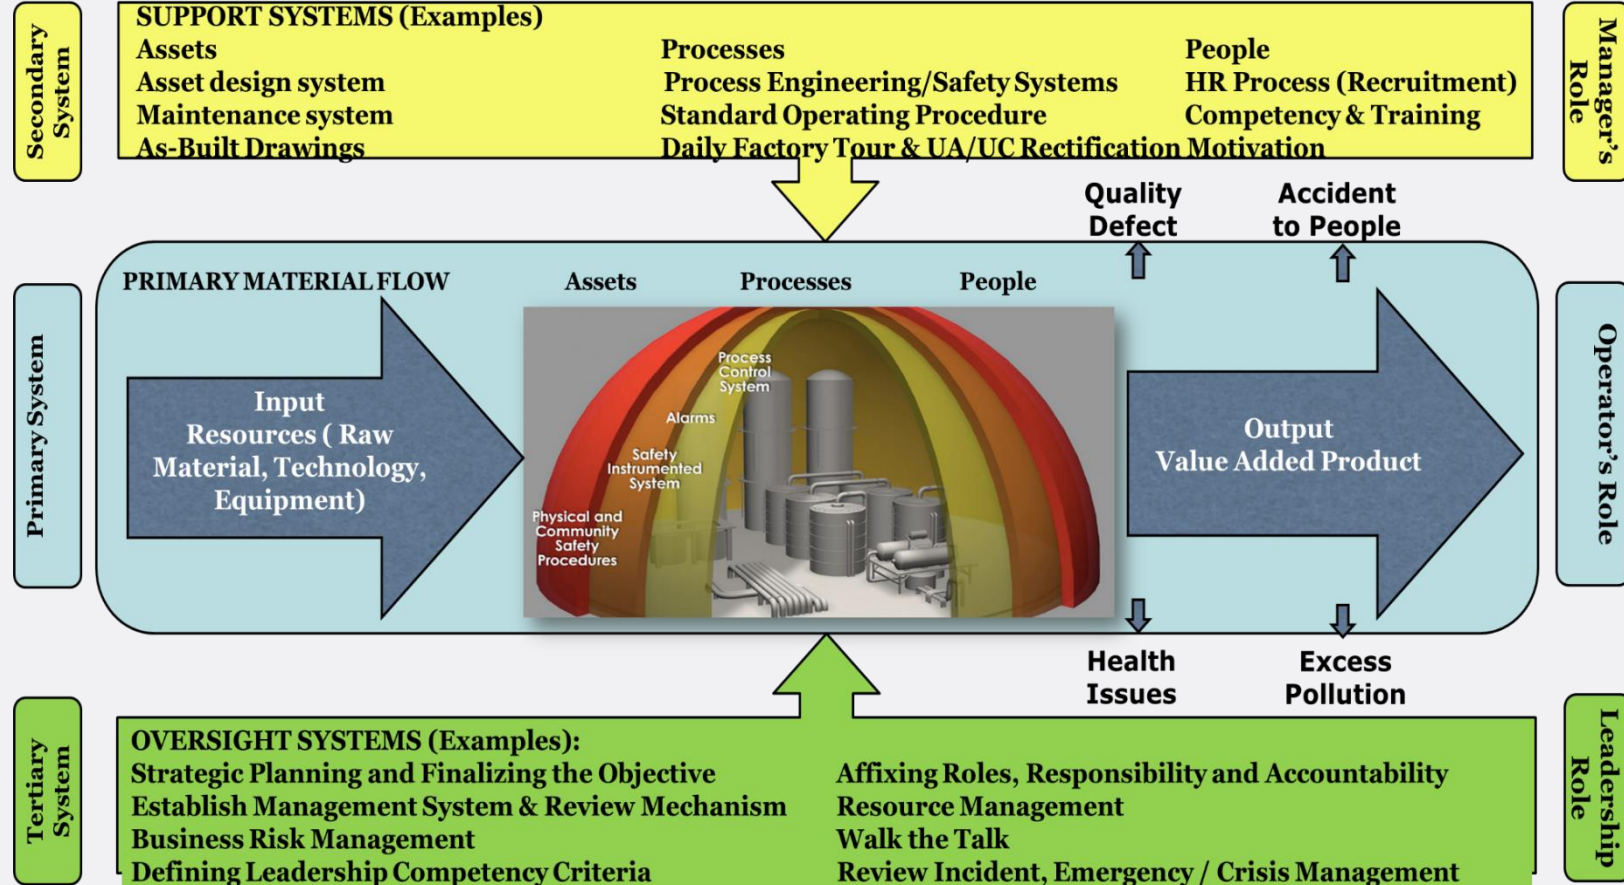

Need Culture to Support

Define Management System ?

Define Business Process : Line Function Knows their Role ?

How does Leadership understand Risks ?

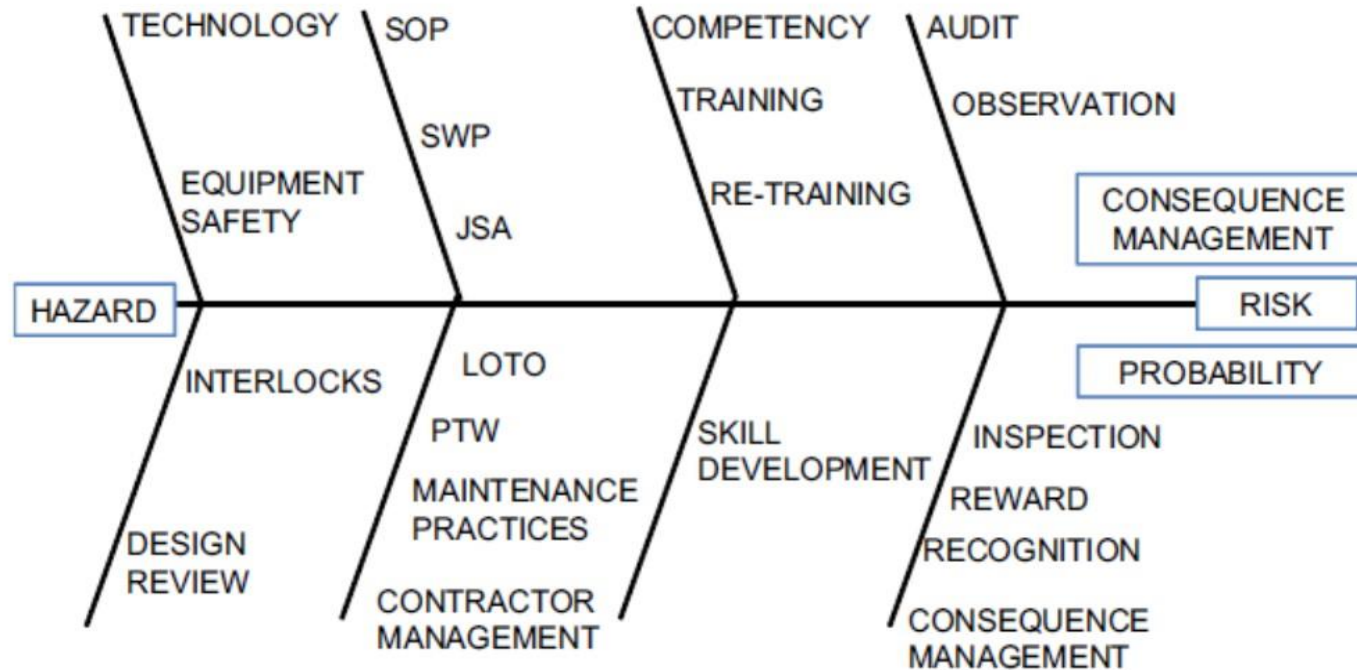

Consequences (C)						Probability (P)				
C	People	Fire	Property Damage	Financial Loss (US\$)	Reputation	5	4	3	2	1
5	Fatality	Response required from outside agencies	Massive	500,000	National and/or international public	25	20	15	10	5
4	LTI/Serious Injury	Response required from local fire service	Major	> 50,000 and <500,000	Regional and/or national public	20	16	12	8	4
3	Restricted Work Case	Activation of sprinklers	Significant damage	>15,000 and <50,000	Some local concern	15	12	9	6	3
2	Medical Treatment Case	Minor Fire/explosion Extinguished by onsite brigade	Minor	> 5,000 and <15000	No public concern	10	8	6	4	2
1	First Aid Case	Minor fire attended to by site fire brigade	Slight	<5000	No public concern	5	4	3	2	1

Estimated known Probability of occurring

1. Improbable - Has occurred in world-wide industry but not in ABG Group Company/BU
2. Remote - Has occurred in another ABG Group Company/ BU
3. Occasional - Has occurred in ABG Business Unit
4. Probable - Happens several times each year in ABG Business Unit
5. Frequent - Happens several times per year in same location or operation

15-25	Extreme Risks	Activity should not proceed in current form. Immediate Risk Control Measures are required to reduce the risk to at least Medium Level. Management review is required before work commences.
8-12	High Risks	Activity should be modified or Control Measures are required to reduce the risk to at least Medium Level.
4-6	Medium Risks	Activity can operate subject to existing operational and management control.
1-3	Low Risks	No Action is required, unless escalation of risks is possible.

How risks are evaluated ?

How risk assessment results are driven inside Board Room ?

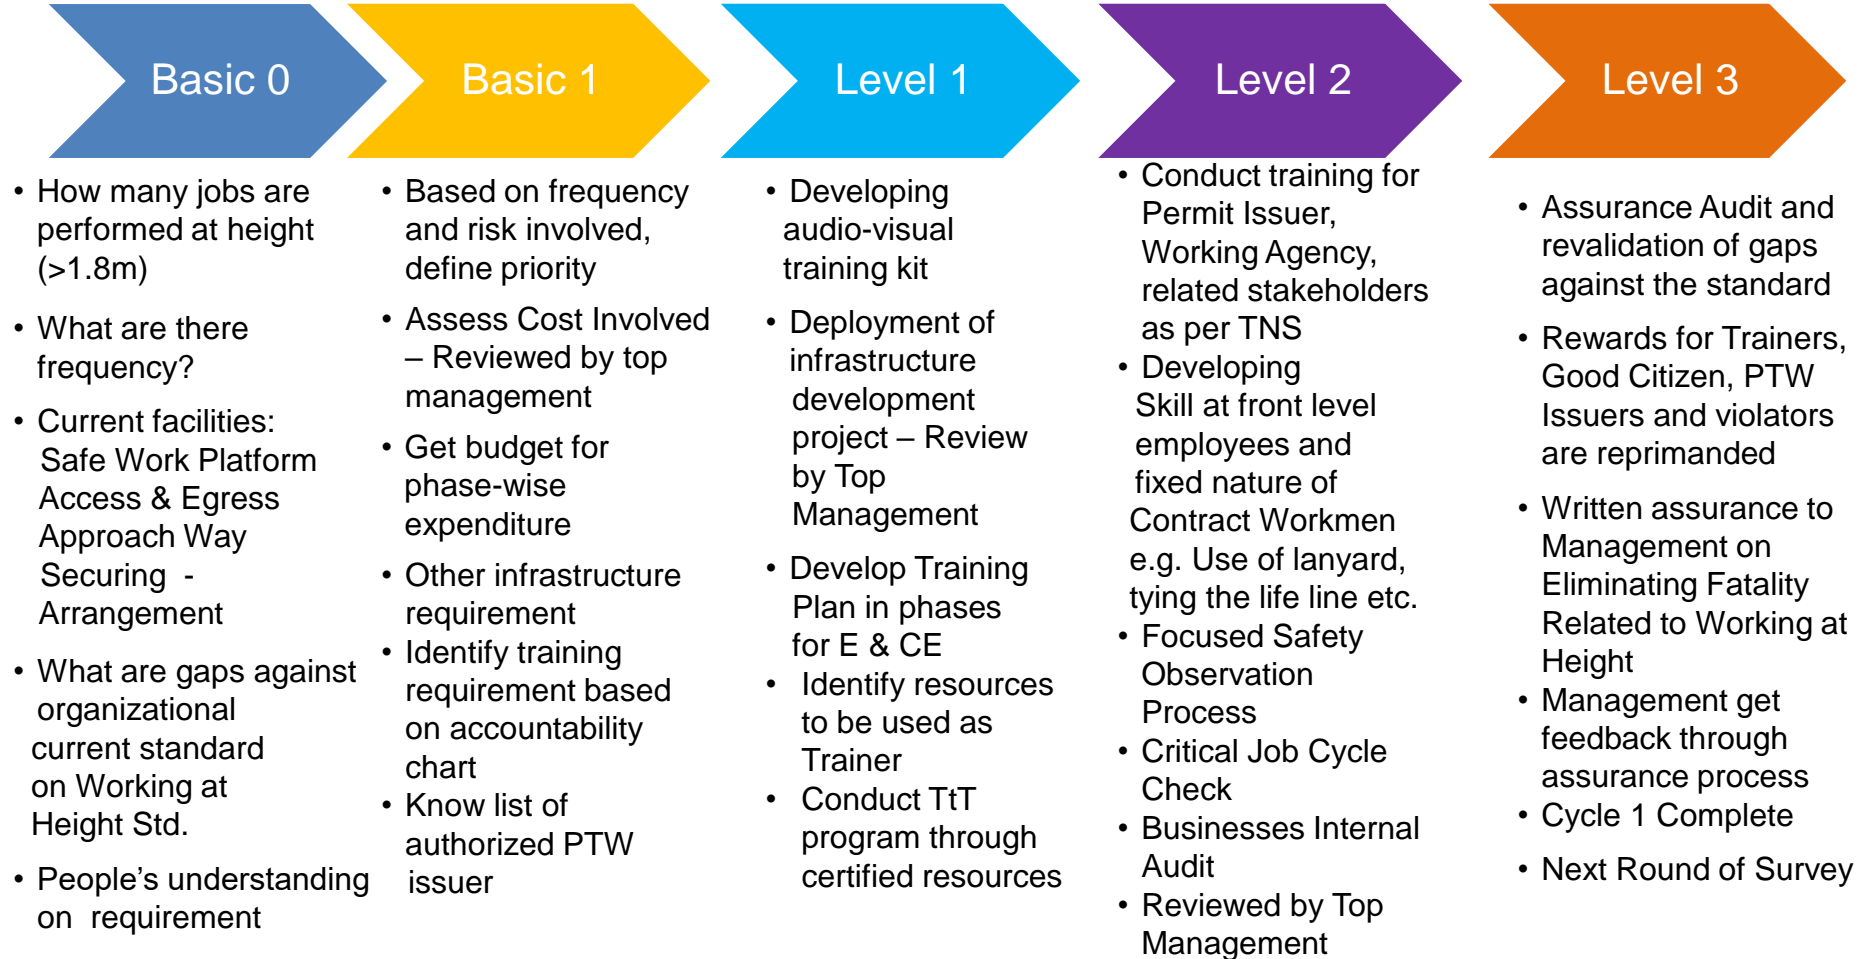

However, need to go beyond risk register to help top management and the Board focus on the real mega-risks – potential company killers

	Number of risks	Magnitude	Example
Board and ExCo	Less than a dozen	Company “killers”	Missed technology step change
Division Heads	Few dozens	Major performance setback	Customer service snafu going viral
Unit Managers	Several dozens	Major event for plant	Supply chain failure
Front Line Supervisors	Few hundreds	Reported incidents	Local equipment breakdown
All employees	Thousands	Unreported incidents	Sprained ankle

How risk assessment results are driven inside Board Room ?

- Risk evaluation process appreciated. Competent resources are allocated.
- Driven as a dynamic tool. Leadership owns and sign it on monthly basis.
- Results influences Planning & Budgetary Process.
- Reviewed at different level with escalation mechanism , can move up to Board of Directors.
- Reflected in assurance result from third party, investors, asset insurers and other stakeholders

Example : Deployment Strategy : Working at Height

Risk Management must lead to safer workforce

Otherwise we will have to intervene when somebody is showing risky behavior.....
